PROFESSIONAL SUMMARY

Business Analyst and QA Automation Engineer with 4+ years across the full SDLC on government and enterprise systems (local-authority financing, e-procurement, ERP). Proven at turning stakeholder needs into approved URS/SRS/SDS, securing client sign-off, and leading UAT/FAT through to go-live. Currently leading end-to-end regression automation with Playwright (web) and Appium (mobile), alongside manual and API testing. Comfortable owning a module from requirements to release in remote, cross-functional teams.

PROFESSIONAL EXPERIENCE

Business Analyst cum Lead Automation Tester (Contract, Remote)

NK System (M) Sdn Bhd | Sep 2025 – Present

- Own the Penguatkuasaan (Enforcement) module of the ePBT financing system for Pihak Berkuasa Tempatan (local authorities), acting as the single point of contact between the authority's users, developers and QA.
- Elicit and document requirements into URS/SRS/SDS, user stories, process flows and acceptance criteria; run walkthroughs with subject-matter experts to obtain client sign-off before development starts.
- Designed and built the module's end-to-end regression suite with Playwright (web) and Appium (mobile), covering core enforcement workflows so releases are regression-tested automatically instead of by hand.
- Lead manual functional and API testing of new features, log and triage defects with developers, and verify fixes before each release.
- Plan and coordinate UAT/FAT sessions with end users: prepare test scripts and data, facilitate sessions, track defects to closure and compile sign-off evidence for the client.

Business Analyst (Contract)

DBT Technologies Sdn Bhd, Petaling Jaya | Jun 2024 – Aug 2025

- Obtained client sign-off for the Perkhidmatan module of DBKL's ePerolehan (e-procurement) system after subject-matter-expert review.
- Conducted UAT sessions with end users for the Perolehan module and prepared the test scripts used to confirm implementation readiness.
- Collaborated with developers, QA and stakeholders to keep delivery aligned with approved requirements, and performed quality checks to identify and resolve defects before release.

System Analyst (Full-time, after 4-month internship)

Pipeline Network Sdn Bhd, Petaling Jaya | Mar 2022 – May 2024

- Gathered requirements and authored URS, SRS and SDS documentation for multiple client projects, securing client approval on each.
- Designed use-case, ERD and swimlane diagrams and low-fidelity Figma screens to visualise processes and data flows before build.
- Led UAT, FAT, PAT and Change Request (CR) processes; maintained bug tracking and user manuals, and ran user training sessions at hand-over.
- Provided ERP customisation and backend integration support (MySQL, Laravel) in line with business requirements.

SKILLS & TOOLS

- **Business Analysis:** URS / SRS / SDS, user stories, acceptance criteria, requirements gathering, client sign-off, UAT / FAT / PAT coordination, Change Requests
- **Test Automation:** Playwright (web E2E), Appium (Android / iOS), regression suites, test reporting
- **Testing:** Manual functional testing, API testing (Postman), defect logging & triage, test scripts and test data
- **Technical:** MySQL, Laravel, PHP, phpMyAdmin, HTML, CSS, JavaScript / TypeScript (test code), Git
- **Methodologies:** SDLC, Agile / Scrum, Waterfall
- **Design & Documentation:** ERD, use-case and swimlane diagrams, Figma (low / high-fidelity UI), user manuals, Microsoft Office
- **Languages:** Bahasa Malaysia (native), English (professional)

EDUCATION

Bachelor of Computer Science (Information Security & Assurance)

Universiti Sains Islam Malaysia · CGPA 3.31 · Dean's List (Semesters 1, 2, 7)
